Office Action Summary

Art Unit: 2834

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-10 and 15-20, drawn to an electrostatic actuator, classified in class 310, subclass 309.
- II. Claims 11-14, drawn to an optical switch using a mirror, classified in class 385, subclass 18.

The inventions are distinct, each from the other because:

Inventions Group I and Group II are related as combination and subcombination.

Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because claims 1, 5-7 and 15 do not require a mirror, while claim II does not require electrostatic actuation or even a multi plated actuator. The subcombination has separate utility such as placement of a part or moving a switch plate.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
